FOR INTERNATIONAL PEACE

The Shanghai Cooperation Organization and the International Politics of Competition and Cooperation around the Caspian Energy Resources

Dr. Martha Brill Olcott

Senior Associate

Carnegie Endowment for International Peace

Energy Facts and Figures

- By 2030, the Caspian area is projected to produce 5.7 million barrels of oil per day
- The EU will import up to 75 percent of its natural gas requirements and two-thirds of its total energy requirements by 2020
- Last year, China's increased oil demands accounted for 38 percent of global growth in demand

¹ Proven reserves are defined by the EIA as those volumes of oil and gas that geological and engineering data show with reasonable certainty to be economically recoverable under existing economic and operating conditions.
² Possible reserves are less precisely quantified and are defined here to include other reserves found through extensions, divisions, and new discoveries.
³ Other estimates (EIA/IEO 2006): 3.45 million bbl/d (Ref. Case, not including Russia), (*World Oil*, 10 March 2004): 3 million bbl/d
