

**United Nations Forum on Energy Efficiency and Energy Security for Sustainable Development:
Taking Collaborative Action on Mitigating Climate Change**

17-18 December 2007, Seoul, Republic of Korea

Cooperation on Energy Efficiency and Energy Security: Perspectives from the Russian Federation

**Andrey Shastitko,
General Director,
Foundation “Bureau of Economic Analysis”
Moscow, Russian Federation**

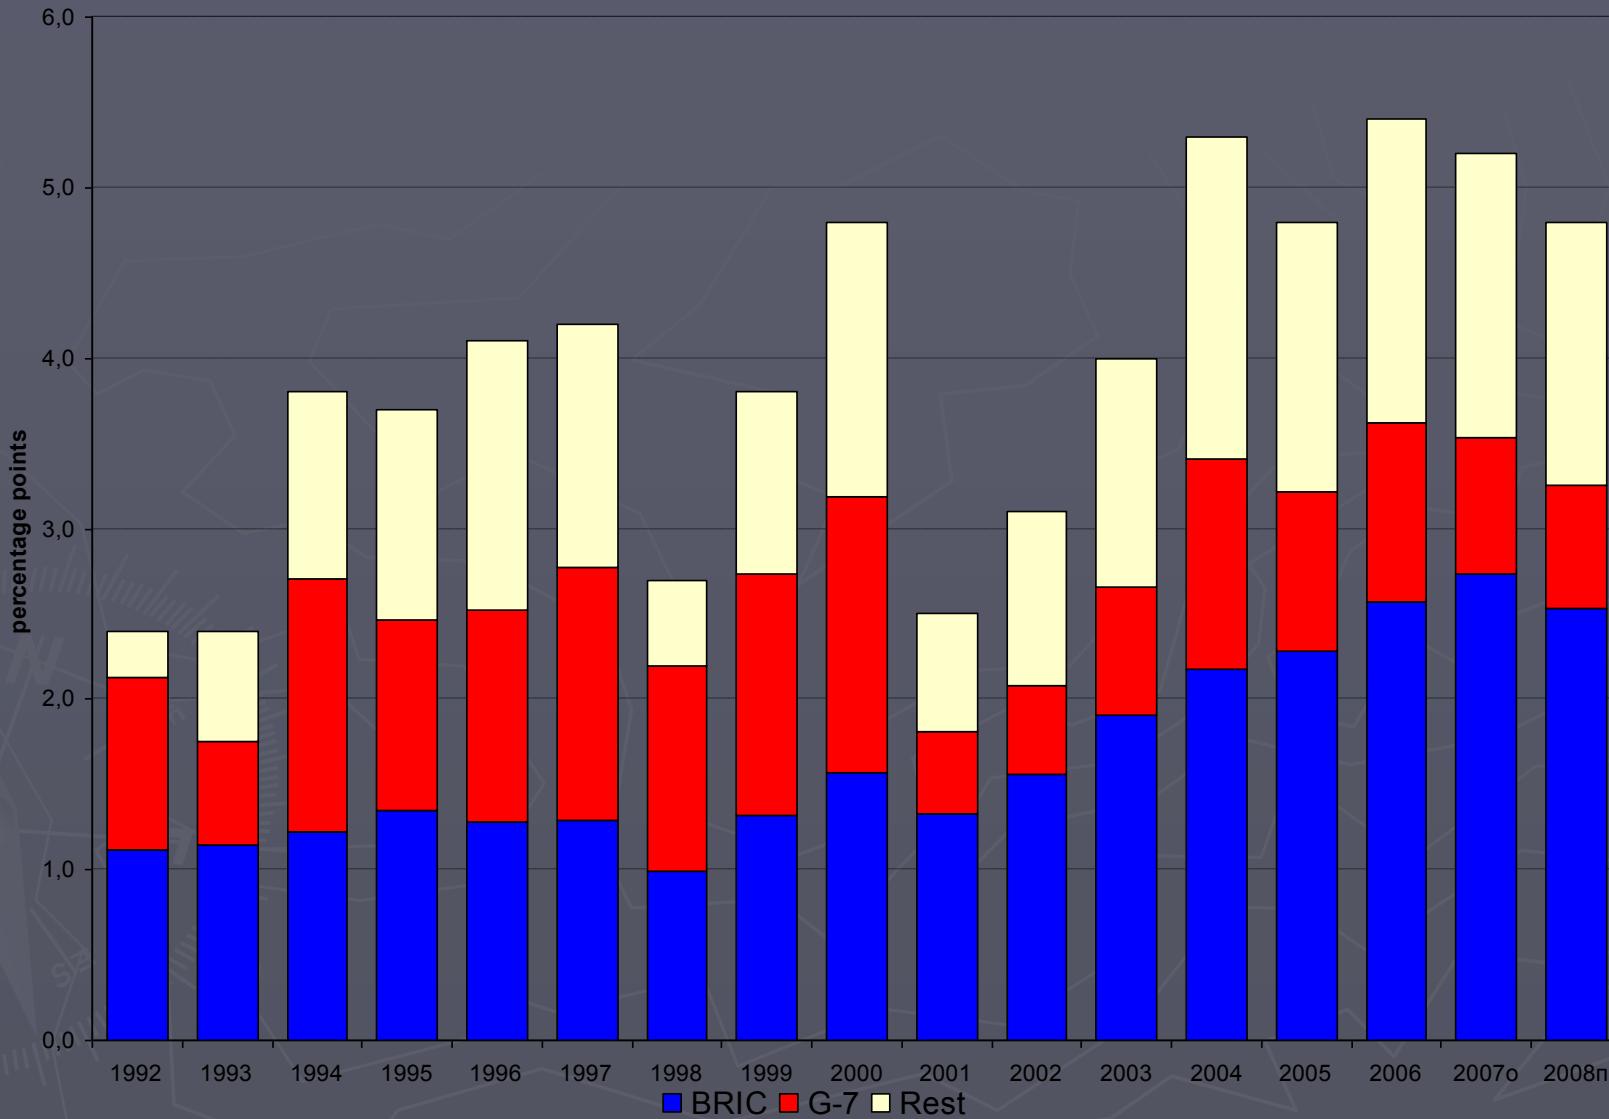

Contents

- 1. Economic dynamics in the world**
- 2. Forecasts on GDP, energy intensity and primary energy consumption**
- 3. Russia in the world: energy perspective**
- 4. Priorities of Russia on energy security provision**
- 5. Russia and energy efficiency**
- 6. Conclusions**

1. Economic dynamics in the world

- ▶ World growth with high oil prices (unlike previous cases of price shocks).
- ▶ Increasing role of countries with EME (esp. BRIC).
- ▶ Increasing role of energy efficiency and security

Contribution to world GDP growth, 1992-2008f (%)

2. Forecasts on GDP, energy intensity, primary energy consumption and oil prices

- ▶ International Energy Agency (World Energy Outlook 2007)
- ▶ Department of Energy US (International Energy Outlook 2007)
- ▶ Institute of Energy and Finance (2007)

Base scenarios of world energy – annual average growth rates (%)

	IEA (2007)			US DE (2007) (base)			IEF (2007)		
	2004-15	2015-30	2004-30	2004-15	2015-30	2004-30	2006-15	2015-30	2006-30
World	4,2	3,3	3,6	4,4	3,8	4,1	4,3	3,9	4,0

Evolution of oil prices forecasts by IEA (in 2005 USD, calculated by IEF)

3. Russia in the world: energy perspective

- ▶ GDP – 2,3% of the World
- ▶ Population – 2,3% of the World
- ▶ Primary Energy – 10,3% of the World
- ▶ Export of energy – 4,7%
- ▶ Internal consumption – 5,6% (including exported energy intensive goods, ex. aluminium)

Russia in the world: energy perspective (continuation)

Russia is country with mostly diversified export by energy sources

- Gas – more than 30% of production
- Oil – about 65% of production
- Coal – about 30% of production
- + energy intensive goods (see. page 10)

4. Priorities of Russia on energy security provision

- ▶ Reliable contractor – sustainability of budget revenues flows and credibility of private companies commitments
- ▶ Cooperation on B2B level – NC +TNC (using of competitive advantages)
- ▶ Exchange of assets – commitments credibility
- ▶ Combined co-opreation (oil-water, China)
- ▶ Internal problems: renovation of generation capacities 4,5 MWt for decade vs. 8 MWt each year in soviet period, combined generation and heating etc.

5. Russia and energy efficiency

- ▶ Energy sector is one of major contributors to anthropologically conditioned GHE
- ▶ Contribution to sustaining of climate as a global public good:
 - Average GDP growth (for last five years) – around 6,7%
 - Average rate of consumption growth – 2,5%
- ▶ Increase of energy efficiency corresponds to long-term conditions for economic development in Russia (lower demand in the long-run – compliance with WTO requirement on energy sources prices - decrease of risks of resource curse)
- ▶ Strategic priorities for Russia: modernization of economy “from energy dependence” but based on resources from energy sector

6. Conclusions

- ▶ Two senses of energy security: climate (energy intensity/efficiency) & sustainability of supply/demand dynamic balance
- ▶ Important role of Russia in energy security provision in both senses from the long-run perspective
